

Brillio Security & SSO (SAML 2.0) Whitepaper

Module: Brillio Shield 2.3. Describes Single Sign-On, provisioning, and security controls, and which products/tiers support them.

SSO via SAML 2.0

Brillio supports SSO using the SAML 2.0 protocol, delivered by the Brillio Shield module. SSO is available on the Pro and Enterprise tiers only. SCIM automated provisioning is Enterprise only.

Tier	SSO via SAML 2.0	SCIM Provisioning
Starter	No	No
Team	No	No
Pro	Yes	No
Enterprise	Yes	Yes

SSO applies across the entire suite: Brillio Core, Brillio Analytics, Brillio Connect, and Brillio Shield all authenticate through the same SAML 2.0 session.

Supported Identity Providers

- Okta
- Microsoft Entra ID (Azure AD)
- Google Workspace
- OneLogin
- PingFederate

Both SP-initiated and IdP-initiated login flows are supported (IdP-initiated added in Shield 2.3).

Configuring SAML 2.0 SSO

- In Brillio, go to Shield > Single Sign-On > SAML 2.0.
- Copy the Brillio SP Entity ID and ACS URL into your IdP.
- Upload the IdP metadata XML (or SSO URL + X.509 signing certificate).
- Map SAML attributes: email (required), firstName, lastName, groups.
- Test with the Test SSO button, then optionally Enforce SSO.

Other Shield Security Controls

- IP allowlisting: up to 200 CIDR ranges per workspace (Team and above).
- Audit logs: 7 days (Starter), 30 days (Team), 1 year (Pro), 7 years (Enterprise).
- Encryption: AES-256 at rest, TLS 1.2+ in transit; customer-managed keys on Enterprise.
- Signed API requests: HMAC-SHA256 with a 5-minute (300s) timestamp tolerance.

Compliance

Brillio maintains SOC 2 Type II. BAA and DPA available on Pro and Enterprise. Data residency: US, EU, APAC (custom on Enterprise).
